Computer programming assignment for pre-engineering (20%)

1. Write a program that check student registration eligibility by
 - A. Input the score from 100% of each pre-engineering courses from the user
 - B. Change the score in to grade
 - C. Calculate GPA
 - D. If GPA ≥ 2.00 print message welcome student you can register
 - E. If < 2.00 print message welcome sorry you can't register. **(10 Point)**
2. Write a program that print a number 1-50 except 5 factorial numbers**(3 Point)**
3. Write a program input value from the user starting from the input multiply 10 consecutive integer numbers and display their product**(3 Point)**

Hint let say the user insert number 4

The program calculates: $4*5*6*7*8*9*10*11*12*13=$ _____

4. Create a three dimensional array that is 3x2x3 the value is the sum of consecutive numbers 1-6 For each layer value is the same **(4 Point)**

Hint Use for loop to assign value for the three dimensional array

Array [0][0][0]=1

Array [0][1][0]=10

Array [0][0][1]=3

Array [0][1][1]=15

Array [0][0][2]=6

Array [0][1][2]=21

ANSWERS

1, the grading system we used for this platform is

Grade>85 =A+

Grade>=80=A

Grade>=75=A-

Grade>=70=B+

Grade>=65=B

Grade>=60=B-

Grade>=55=C+

Grade>=50=C

Grade>=45=C-

Grade>=40=D

Grade>40=F

By using this data we have made a platform that full fill the criteria of the assignment

And this is the code or program of the platorm

```
#include<iostream>

using namespace std;

float subjectgrade (float subject) {

    float subjectgrade;

    if(subject>=85){

        subjectgrade= 4;

    }
```

```
else if(subject>=80) {  
    subjectgrade = 3.75;  
}  
else if(subject>=75) {  
    subjectgrade = 3.5;  
}  
else if(subject>=70) {  
    subjectgrade = 3;  
}  
else if(subject>=65) {  
    subjectgrade = 2.75;  
}  
else if(subject>=60) {  
    subjectgrade = 2.5;  
}  
else if(subject>=55) {  
    subjectgrade = 2;  
}  
else if(subject>=50) {  
    subjectgrade = 1.75;  
}  
else if(subject>=45) {  
    subjectgrade = 1.5;  
}  
else if(subject>=40) {  
    subjectgrade = 1;
```

```

}

else{
subjectgrade = 0;
}

return subjectgrade; }

int main(){

cout<<"WELCOME TO DIREDAWA UNIVERSITY"<<endl<<"DDU"<<endl<<"PRE-
ENGINEERING STUDENTS REGISTERING PLATFORM"<<endl;

Float
english,applied_math,civic,computer_programing,entrepreunrship,anthropology,history,e
merging_tech;

cout<<"WRITE YOUR ENGLISH SCORE(100%)"<<endl;

cin>>english;

cout<<"WRITE YOUR APPLIED MATH SCORE(100%)"<<endl;

cin>>applied_math;

cout<<"WRITE YOUR CIVIC SCORE(100%)"<<endl;

cin>>civic;

cout<<"WRITE YOUR COMPUTER PROGRAMING(C++) SCORE(100%)"<<endl;
cin>>computer_programing;

cout<<"WRITE YOUR ENTREPRUNERSHIP SCORE(100%)"<<endl;

cin>>entrepreunrship;

cout<<"WRITE YOUR ANTROPOLOGY SCORE(100%)"<<endl;

cin>>anthropology;

cout<<"WRITE YOUR HISTORY SCORE(100%)"<<endl;

cin>>history;

cout<<"WRITE YOUR EMERGING TECHNOLOGY SCORE(100%)"<<endl;
cin>>emerging_tech;

```

```

float total_gpa;

float enggpa=subjectgrade(english),mathgpa=subjectgrade(applied_math),
histgpa=subjectgrade(history),anthrogpa=subjectgrade(anthropology),emerggpa=subjectg
rade(emerging_tech),entrgpa=subjectgrade(entrepreunrship),cppgpa=subjectgrade(comp
uter_programing),civgpa=subjectgrade(civic);

total_gpa=((5enggpa)+(5mathgpa)+(5histgpa)+(2anthrogpa)+(5emerggpa)+(5entrgpa)
+(5cppgpa)+(4civgpa))/36;

cout<<"YOU HAVE GPA OF"<<total_gpa<<endl;

if(total_gpa>=2){

cout<<"welcome to our platform"<<" you can register"<<endl;

}

else{

cout<<"welcome"<<endl<<"sorry but you cant register"<<endl;

}

return 0;

}

```

2, write a program that print a number 1-50 except 5 factorial numbers ?(except numbers of 5 factorial)

```

#include<iostream>

using namespace std;

int main(){

for(int x=1;x<=50;x++){

```

```

if(x%5!=0){
cout<<x<<" ";
}
}
return 0;
}

```

3, Write a program input value from the user starting from the input multiply 10 consecutive integer numbers and display their product

```

#include<iostream>
using namespace std;
int main(){
int x,product=1,j;
cout<<"ENTER YOUR NUMBER"<<endl;
cin>>x;
for(int j=0;j<10;j++){
product *=(x+j);
}
cout<<"the product is "<<product<<endl;
return 0;
}

```

4, Create a three dimensional array that is 3x2x3 the value is the sum of consecutive numbers 1-6
For each layer value is the same

```
#include<iostream>

using namespace std;

int main(){
    int arr[3][2][3];
    for(int i=0;i<3;i++){
        cout<<"layer "<<i<<endl;
        int sum=0;
        int add=1;
        for(int j=0;j<2;j++){
            {
                for(int k=0;k<3;k++){
                    {
                        sum=sum+add++;
                        arr[i][j][k]=sum;
                        cout<<arr[i][j][k]<<"\t";
                    }
                }
                cout<<endl;
            }
        }
        cout<<endl;
    }
    return 0;
}
```
